Precision Point Diagnostics

Precision Point Diagnostics is an innovator of testing solutions that assist in the diagnosis and management of conditions commonly addressed by integrative medicine. Their unique profiles are designed to help practitioners address comprehensive approaches to patient care. They also offer educational programs to empower practitioners and patients.

The highly experienced Doctors of Precision Point Diagnostics have created a series of lab tests that are most useful in diagnosing and helping treat conditions commonly addressed by functional and integrative medicine.

These include comprehensive standard testing including thyroid, lipids and others always giving more in depth information than usual. Below highlights some of the more specialized offerings available from Precision Point Diagnostics.

They offer extremely robust **testing for food allergies, food sensitivities and food intolerances** that are very thorough. Precision Point Diagnostics also has **Airborne Allergy testing** that looks at your body's IgE response to many common airborne allergens, including animal dander, trees, weeds, crops and mold. **Click Here** for more information including instructions for the testing options.

The **Advanced Intestinal Barrier Assessment measures DAO, Histamine, DAO:Histamine ratio and Zonulin.** Diamine Oxidase is an enzyme that breaks down Histamine. Histamine is a compound that affects immune response, physiological function of the digestive tract, and acts as a neurotransmitter. Zonulin plays an important role in the opening of small intestine tight junctions. LPS reactions are also measured which gives additional information about the immune system and gut barrier function. **Click Here** for more information including instructions for the test.

The **Comprehensive Digestive Analysis** offered by Precision Point Diagnostics is designed to test the ecology and physiology of the gut. While traditional stool cultures only look for a few pathogenic gut flora, this test evaluates hundreds of different species of flora to assess the impact on intestinal health. The Complete Stool culture includes all gut bugs, measures of gut lining to assess gut permeability, as well as measures of absorption and digestive enzymes. **Click Here** for more information including instructions for the test.

Precision Point Diagnostics offers two panels for measuring oxidative stress, a **Basic Oxidative Stress Test** which is a urine test and an **Advanced Oxidative Stress Test** that requires both a urine and blood sample. Both show how much oxidative stress there is in the body and how effectively antioxidant enzymes remove it. Oxidative stress is responsible for damage to cells and is a major contributor to the aging process. These panels give an overall picture of cell health and the risk of oxidative stress related health conditions. **Click Here** for more information including instructions for the test.

Precision Point Diagnostics is generally a patient pay lab. They require pre-payment before any collection kits are sent to patients.
